Revolutionising Procurement Processes with Tailored Solutions from Elogs CAFM

Executive summary from Rob Mead, Managing Director, Elogs

Having worked with many Procurement Directors over the years, we truly understand the struggles and challenges they face every day.

For Procurement Directors, monitoring supplier performance, compiling monthly reports, and ensuring data security is part of the day-to-day job. But managing these priorities and hitting targets can be difficult to manage without the support of Computer Aided Facilities Management (CAFM) software.

Elogs CAFM makes life easier for Procurement Directors, allowing them to save time, drive productivity and reach their goals. It generates monthly reports, tracks supplier performance, and gives Procurement Directors total visibility of their properties.

Ultimately, Elogs CAFM helps Procurement Directors as it provides options to gain visibility of assets, monitor supplier performance, and gather data securely. With Elogs CAFM, we help Procurement Directors maximise efficiency, save time, and simplify data management.

What challenges do Procurement Directors face?

Procurement Directors face various challenges when it comes to carrying out daily tasks and operations. These challenges include:

- Tracking supplier performance.
- Ensuring data security.
- Having total visibility of buildings and assets.
- Monitoring KPIs.
- Putting together accurate, up-to-date reports.

These challenges have made it tricky for Procurement Directors to manage their day-to-day tasks and drive productivity. Without software with real-time data and the ability to receive audit trails, tracking asset and supplier performance can be difficult to do.

At Elogs, we empathise with these struggles which is why we've designed Elogs CAFM to provide targeted solutions for Procurement Directors.

How does Elogs CAFM address these challenges?

Monthly reports

We understand that Procurement Directors need to have an overarching view of what is happening across their buildings and assets at any given time. This means that they need regular reports that can give them the data they need to make informed decisions. With Elogs CAFM, we provide a monthly report that offers a rolling 12-month trend analysis on reactive and planned attendance and completion.

This enables Procurement Directors to visually track performance across their portfolio, specific sites, as well as suppliers and contractors. For Procurement Directors, this functionality is ideal for monitoring improvements and performance trends across the board.

Audits

In Elogs CAFM, our audit tool can support Procurement Directors in gathering the audit data they need to enhance visibility and make decisions regarding suppliers and contractors. This tool allows you to easily track the follow up process to any identified actions.

Supplier performance monitoring

Elogs CAFM offers a comprehensive supplier management system where every interaction is integrated and measured. Our CAFM system allows you to track live supplier performance or view historical data to report on changes over time. With this functionality, you can benchmark service providers against each other to report on SLAs and KPIs.

We understand that Procurement Directors need to secure the best price and the best quality for suppliers and contractors; that's why Elogs CAFM has been designed to help them track supplier performance and demonstrate the return on investment with real-time data and monthly reports.

With Elogs CAFM, Procurement Directors can see which suppliers and contractors are most effective, making it easier to decide who to retender with.

Multiple site management tool

One of the most important aspects of a Procurement Director's job is to have complete visibility of their buildings, assets, and suppliers and contractors. By having a tool that provides an overarching view of what is happening across their assets, they can find the data they need.

With this data, Procurement Directors can ensure that the right data is shared with the right people. That's why having permission-based data (like in Elogs CAFM) is such an important part of ensuring data security.

One of the main solutions that Elogs CAFM provides is giving you total visibility of everything that is happening on your sites. This allows you to receive online audit trails, see supplier performance stats or get a top-level exception report.

KPI tool

The KPI tool in Elogs CAFM streamlines joint performance reviews between Facilities Managers and suppliers and contractors, with configurable questionnaires and automated scheduling.

After submission, Facilities Managers can review and adjust scores, enabling trend analysis as well as helping them identify potential issues.

With this tool, Procurement Directors can easily see which suppliers and contractors are performing well and make decisions based on KPIs. The input from the Facilities Managers, as well as the suppliers and contractors, gives Procurement Directors everything they need to make data-driven decisions.

Prosure360 integration

Elogs CAFM is integrated with Prosure360, a supply chain management software, which allows you to set supply chain standards and view a traffic light report of supplier compliance, ensuring suppliers and contractors meet your criteria at a glance.

Our integrated platforms offer real-time data on insurance, SSIP qualification, pre-qualified assessments, and financial health to allow for informed supplier decision-making.

Our system is designed to proactively identify and remedy inefficiencies across your properties, giving you real-time visibility and control. Elogs CAFM will allow you to unlock the power of comprehensive contract and supplier management while seamlessly organising your assets with our cutting-edge solutions.

We understand that Procurement Directors need to know the status of their suppliers and contractors at any given time. This is especially important when deciding whether to retender with a supplier or contractor. The combined power of Elogs CAFM and Prosure360 allows Procurement Directors to gather all the information they need regarding suppliers and contractors.

What are the benefits of Elogs CAFM for procurement directors?

Increased visibility

Elogs CAFM provides total visibility of your buildings and assets, enabling data-driven decisions and optimised performance. Our centralised system houses all data relating to buildings, assets and suppliers. With permission-based data, Procurement Directors can easily find and share the information they need to make important decisions.

Audit trail and reporting

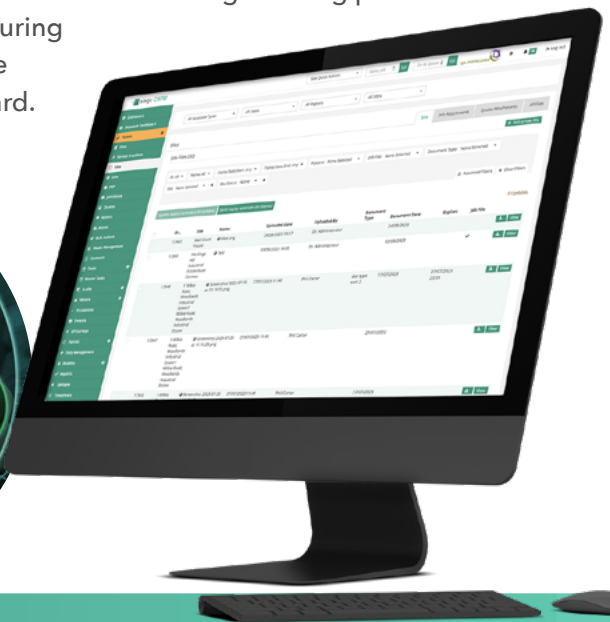

Elogs CAFM maintains detailed records of all procurement activities, creating a comprehensive audit trail. It is the perfect system for data analytics and reporting, helping Procurement Directors track supplier performance, as well as consolidating the required insurances, certifications and critical documentation in one place.

Integration capabilities

At Elogs, we know the hurdles Procurement Directors encounter when common data needs to be managed across multiple systems. These challenges often lead to duplication, delays, and errors.

Our integration with Prosure360 gives Procurement Directors full control over the supply chain, allowing them to verify whether contractors and suppliers meet their specific requirements.

Investing in Elogs CAFM helps Procurement Directors drive efficiency, track performance, and select trustworthy suppliers and contractors. Our expertise and tailored software solutions are unmatched for enhancing building performance and ensuring compliance across the board.
